

**Amendments to the Claims:**

Claims 1, 2, 8, 10, 12-14, and 16 have been amended herein. Please note that all claims currently pending and under consideration in the referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1. (Currently Amended) A method for preserving hyperlinks, comprising:  
inviting a first computer including a hyperlink stored thereon to register said hyperlink with a  
second computer hosting a data file associated with said hyperlink; and  
when said first computer accepts an invitation to register,  
registering said [[a]] hyperlink stored on said [[a]] first computer with said [[a]]  
second computer hosting said [[a]] data file associated with said hyperlink;  
and  
notifying said first computer of a change in said data file associated with said  
hyperlink.
2. (Currently Amended) The method of claim 1, wherein registering said [[a]]  
hyperlink stored on said [[a]] first computer comprises:  
~~identifying said data file associated with said hyperlink; and~~  
identifying an e-mail address for notifying via e-mail changes to said data file.
3. (Original) The method of claim 2, further comprising saving said data file  
identification in a user database.
4. (Original) The method of claim 2, further comprising saving said e-mail  
address identification in a user database.

5. (Original) The method of claim 2, further comprising:  
saving said data file identification in a user database accessible to said second computer;  
saving said e-mail address identification in a user database accessible to said second  
computer; and  
creating a relationship between said saved data file identification and said saved e-mail  
address identification for facilitating said notifying of said first computer of a change  
in said data file.

6. (Original) The method of claim 1, wherein notifying said first computer of a  
change in said data file associated with said hyperlink comprises e-mailing a notification of  
said data file change to said first computer.

7. (Original) The method of claim 1, wherein notifying said first computer of a  
change in said data file associated with said hyperlink comprises notifying an individual in  
charge of maintaining said hyperlink of said change in said data file.

8. (Currently Amended) A method for preserving Internet or intranet  
communications, comprising:  
storing at a network computer a hyperlink for linking to at least one data file stored on a host  
server computer;  
inviting said network computer including said hyperlink stored thereon to register said  
hyperlink with said host server hosting said at least one data file associated with said  
hyperlink; and  
when said network computer accepts an invitation to register,  
registering said hyperlink with said host server computer; and  
notifying a party responsible for maintenance of said hyperlink of any changes in said  
at least one data file that affect the integrity of said hyperlink.

9. (Original) The method of claim 8, further comprising, storing a set of  
registration data in a user database.

10. (Currently Amended) The method of claim 9, wherein storing a set of registration data in a user database comprises storing a set of registration data in a user database accessible to said host server computer.

11. (Original) The method of claim 9, wherein storing a set of registration data in a user database comprises storing a set of registration data selected from the group consisting of uniform resource locators, e-mail addresses, hyperlinks, and data file names.

12. (Currently Amended) The method of claim 8, wherein said storing a hyperlink comprises, storing a hyperlink on a network computer ~~first computer~~.

13. (Currently Amended) The method of claim 8, wherein registering said hyperlink with said host server computer comprises initiating said registration by said host server computer.

14. (Currently Amended) The method of claim 8, wherein registering said hyperlink with said host server computer comprises:  
retrieving a uniform resource locator associated with said network computer ~~a computer~~  
storing said hyperlink;  
identifying a file name of said at least one data file stored on said host server computer  
~~associated with said hyperlink; and~~  
storing said uniform resource locator and said identified file name in a user database.

15. (Original) The method of claim 8, wherein said notifying a party responsible for maintenance of said hyperlink of any changes in said at least one data file that affect the integrity of said hyperlink comprises e-mailing a notification to said party responsible for maintenance of said hyperlink.

16. (Currently Amended) A registration and notification system for preserving the integrity of hyperlinks, comprising:

a host server;

at least one data file accessible to said host server;

at least one remote server;

at least one hyperlink stored on said at least one remote server, said at least one hyperlink associated with said at least one data file, said host server further configured to invite said at least one remote server said at least one remote server including said at least one hyper link stored thereon to register said at least one hyperlink with said host server hosting said at least one data file associated with said at least one hyperlink;  
and

a user database stored on said host server for identifying said at least one hyperlink associated with said at least one data file when said at least one remote server accepts an invitation to register.

17. (Original) The system of claim 16, wherein said host server comprises:

at least one central processing unit;

at least one input device;

at least one output device;

at least one communications port;

~~at least one storage media for storing data;~~ and

a URL address associated with said host server.

18. (Original) The system of claim 17, wherein said user database stored on said host server is stored on said at least one storage media.

19. (Original) The system of claim 16, wherein said remote server comprises:  
at least one central processing unit;  
at least one input device;  
at least one output device;  
at least one communications port;  
at least one storage media for storing data; and  
a URL address associated with said host server.

20. (Original) The system of claim 16, wherein said user database stored on said host server comprises data selected from the group consisting of uniform resource locators, e-mail addresses, hyperlinks, and data file names.
